## **PUBLIC CONSULTATIONS ON CAPPING OF ESTIMATED BILLING AND DISTRIBUTION FRANCHISING**

The Nigerian Electricity Regulatory Commission in furtherance of its mandate to ensure adequate, safe, reliable power supply is finalizing a capping regime aimed at incentivising metering of electricity customers while discouraging estimated billings by the electricity distribution companies. The Commission is therefore, conducting public consultations on the proposed capping regime and a Regulation on Distribution Franchising

The proposed capping regime will be a transitional measure that would herald the massive deployment of meters to all unmetered electricity customers in Nigeria under the Meter Asset Providers (MAP) Regulation.

It is expected that the public consultations will afford the opportunity of input by the general public on the Distribution Franchising, and the proposed regime of capping of estimated billing.

Consequently, the Commission is inviting the general public to a consultation on the above proposals to enable her finalise on each of the items as follows:
