

ORDER/NERC/273/2021

BEFORE THE NIGERIAN ELECTRICITY REGULATORY COMMISSION
IN THE MATTER OF THE EXTRAORDINARY REVIEW OF MULTI-YEAR TARIFF ORDER FOR
IBADAN ELECTRICITY DISTRIBUTION PLC

1.1. Title

This regulatory instrument may be cited as NERC Order on Performance Improvement Plan ("PIP") and Extraordinary Tariff Review Application for Ibadan Electricity Distribution Plc ("IBEDC").

1.2. Commencement

The approved PIP and Capital Expenditure ("CAPEX") programme of IBEDC shall take effect from 1st July 2021 and shall remain effective until 30th June 2026 unless amended by the Commission.

1.3. Context

IBEDC applied to the Commission in November 2019 for a review of the provisions for CAPEX in its Multi-Year Tariff Order ("MYTO") tariffs to support the implementation of its Performance Improvement Plan ("PIP") over the next 5 years. Under the Power Sector Recovery Program (PSRP), it is envisaged that the Commission would implement a robust tariff review process aiming at improving the performance of the Nigerian Electricity Supply Industry ("NESI"). This process involved a review of the capital expenditure allowances in the MYTO model to align with the Performance Improvement Plans (PIPs) of the Distribution Companies (DisCos). The approved PIP and Extraordinary Tariff Application shall form the basis for IBEDC to prioritise the implementation of the proposed CAPEX initiatives. The approved PIPs shall also form the basis for defining KPIs for IBEDC for the next 5 years by the Commission with emphasis on improvement in energy throughput and improved service delivery to the customers.

As part of the Stakeholder Consultation Process for Extra Ordinary Tariff Review, the Commission held public hearings to consider the application filed by IBEDC in February 2020 and monitored the stakeholders' engagements by IBEDC at different locations within

1

its franchise. Based on the feedback received during the consultations and subsequent deliberations with various stakeholders, the Commission approved the Service-Based Tariff (SBT) effective from the 1st of September 2020 to ensure that rates paid by customers align with the quality of service as measured by the daily average availability of power supply over a 60-day reference period. Further updates to IBEDC's initial PIP submission have been considered as part of this review to align the PIPs with customer expectations of service commitment by IBEDC.

1.4. Summary and Overview of IBEDC's Network/Current State

Ibadan Electricity Distribution Company (IBEDC) is one of the successor distribution companies created following the unbundling and privatization of the state-owned Power Utility, Power Holding Company of Nigeria Plc. IBEDC is primarily responsible for the distribution of electricity to Ogun, Oyo, Osun, Kwara states, and parts of Ekiti and Niger States. IBEDC's PIP sets out to increase value to its customers, shareholders, and other stakeholders. Central to IBEDC's plan is the need to expand access to electricity for customers, improve technical and operational performance within the franchise area, and break even within the time horizon while responsibly managing the socio-economic and environmental impacts. IBEDC serves over 1.7 million customers and has a staff strength of about 2612 permanent and 1203 temporary workers.

IBEDC's network is supplied from a transformation capacity of 2,088 MVA from across 22 TCN transmission stations. 118 33kV feeders supply 33/11kV power transformers across 119 injection substations. There are 9,137 11/0.415kV distribution transformers and 5,689 33/0.415kV distribution transformers served by IBEDC. The total transformational capacity of the 11/0.415kV and the 33/0.415kV distribution transformers are 2,667 MVA and 2,152MVA, respectively. The route length for the 33kV, 11kV, and 415V feeders are 1,642.3km, 2,496.6km, and 5,927.4km respectively, resulting in a total route length of 10,065.2km.

Ibadan faces technical network constraints due to the reduced MVA capacity of the TCN stations, as compared to the operational capacity that needs to serve the customers' demand. For instance, during 2019 the peak demand was 1,438 MW, but the operational capacity of the 22 CN stations was 1,302 MW (although nameplate capacity is 1,805 MVA). In particular, substation Ojere (with a nameplate capacity of 90MVA served a peak demand of 146 MW) and is expected to serve 205 MW in 2024. There are already 12 constrained stations in 2019 (Ayede, Ganno, Ibadan North, Ijebu North, Ile Ife, Illesa, Ilorin TCN, Iseyin, Iwo, Offa, Ojere, and Sagamu), and that number would cover 6 other stations in 2024 (Ijebu Ode, Jebba, Jericho, Oke Aro, Oshogbo and Ota) if no investments are implemented.

Handwritten signatures of John Arotile and Tunde Oyedele, likely officials of the Nigerian Electricity Regulatory Commission, are present at the bottom right of the page.

The investment plan proposed by IBEDC is targeted to:

- i. upgrade existing network capacity,
- ii. invest in technological enhancements to reduce outages and system failures,
- iii. acquire tools to analyse network performance and network assets.

1.5. Stakeholder Consultation

IBEDC had followed a process for stakeholder consultation as directed by the Commission. Several focused group discussions to harness stakeholder's views on the service delivery, future expectations, and preferences were conducted with participants.

Key discussion areas for the stakeholder sessions were:

- Quality and reliability of supply
- Quality of the metering, billing, and payment process
- Consumers perception of the processes
- Consumers relationship management
- Quality of fault complaint and repairs process

1.6. Outputs proposed with interventions:

IBEDC proposes to undertake numerous interventions to improve service delivery to the customers. Over the next five years, the proposed interventions will allow IBEDC to achieve the following:

- Facilitate access to the network for customers
- Obtain 99% metering coverage for all customers
- Improve Energy Availability
- Reduce ATC&C losses according to the performance agreement
- Reduce operating costs by leveraging technology
- Improve customer experience
- Improve Customer Communication and engagement
- Implement a Corporate Social Responsibility program
- Empower employees with quality training and competitive remuneration

Specifically, the major outputs proposed by IBEDC can be summarized as follows:

- Reduce ATC&C losses to 19% in 2022
- Reduce customer interruptions from 0.85 to 0.7 per day
- Achieve 100% metering of all customers by 2024
- Reduce the number of deaths and accidents to zero

Average Duration of Interruptions	Hrs/day	10	-1	9	-8.53%

1.7. Investment Strategies:

Key strategies proposed by IBEDC to attain the targeted service levels over the next 5 years include the following:

1. Implementation of investments and other initiatives in distribution network rehabilitation and upgrade aimed at resolving existing constraints limiting availability and quality of energy supply.
2. Identification of eventual constraints to meeting electricity demand arising from issues affecting high and medium voltage network infrastructure.
3. TCN-DisCo interface projects are required in resolving existing constraints and meeting electricity demand.
4. Installation of metering systems to capture all electrical parameters involved in commercial transactions with NBET and TCN and amounts of energy injected into the network operated by the DisCo.
5. Incorporation of an Incidents Recording and Management System (IRMS) to identify the location and analyze the extent of an interruption in electricity supply and to enable fast resolution and service restoration.
6. Regularization of consumers not registered as customers.
7. Installation of appropriate meters for all the ministries, departments, and agencies at federal, state, and local levels.
8. Incorporation of a Commercial Management System (CMS) to manage all commercial processes: revenue cycle, attending to customers, etc.
9. Incorporation of an Enterprise Resource Planning (ERP) information system to support corporate planning and management of shared services (accounting, finance, human resources, procurement, logistics & information technology).
10. Implementation of a Revenue Protection Project (RPP) supported by Advanced Metering Infrastructure (AMI) to systematically record and monitor consumption of large and medium customers.

11. Incorporation of a Supervisory Control and Data Acquisition System (SCADA) to operate and control HV & MV infrastructure.

2.0 Commission's Review

2.1. The Commission's Guideline for PIP Application established the criteria for IBEDC to prepare an output-based plan that sets out the service improvement output targets over the planning horizon of 5 years. This plan includes the programs and activities that will lead to the realisation of those outputs, the human and material resources required, the projected costs and analysis of the risk factors, and the proposed mitigation measures. IBEDC's PIP and Extraordinary tariff review application was exposed to a Public Hearing and consultation presided over by a panel of three commissioners in line with the Business Rules of the Commission and the "Regulations on Procedure for Electricity Tariff Reviews in the Nigerian Electricity Supply Industry" in February 2020. The Hearing provided an avenue for customers, interested parties, and expert intervenors to critically examine IBEDC's proposal and the associated expected improvement in service levels. IBEDC was further directed to conduct stakeholders' (customers') engagements at various locations within its franchise area which were attended and monitored by the staff of the Commission.

2.2. Following the outcome of the public consultation, the Commission had vide Order NERC/198/2020 required IBEDC to update its PIP and Extraordinary Tariff Review Application by disaggregating its respective service areas and/or customers per quality of service in order to align rates payable by customers with the quality of supply ("service-based tariffs"). A further review of IBEDC's updated submission was considered using the following criteria:

- i. completeness and consistency of the description of each component of the PIP;
- ii. compliance of each component with the Guidelines for preparation of PIPs issued by the Commission;
- iii. analysis of expected results/outcomes from the implementation of each component including the mitigants provided for addressing identified challenges that may hinder the achievement of target;
- iv. thorough price benchmarking and other relevant approaches to the estimation of resources (physical amounts and related OpEx and CapEx) for each component;
- v. determining if the cost and timeline for delivering the output is efficient;
- vi. assessing the efficiency of the proposed financing arrangement;
- vii. analysing the level of technology/modernization leap proposed going forward;
- viii. determining and analysing the overall level of efficiency improvement proposed.

3.0 Results of the Review

The Commission, having considered IBEDC's PIP and Extraordinary Tariff Review Application in line with the provision of EPSRA and relevant regulations, approved the PIP and CAPEX programme over 5 years as provided in Table – 4 and Table – 5 below.

Summary of approved projects for Year-1 and Year-2 are also provided in Table – 6, while a detailed list of approved projects for Year-1 and Year-2 are provided in Appendices 1 and 2 respectively.

4.0 Annual Update of PIPs

IBEDC shall be required to provide an annual update to the PIP to reflect the proposed investment programme as part of the Minor Review of Tariffs on a continuous basis. The Commission recognizes this PIP as a dynamic roadmap of where IBEDC envisions to be in the next five (5) years and will continue to evolve in alignment with market development and changes to the operating environment. IBEDC may invest more than the indicated annual CAPEX figure in any particular year on account of front-loading proposed future investments or due to the unanticipated critical investment needs subject to the approval of the Commission.

5.0 Front-loading of CAPEX

IBEDC is at liberty to front-load its CAPEX programmes to attain accelerated service improvements. Front-loading of CAPEX programme in any year shall not exceed annual CAPEX for the following year in line with the framework for continuous update of the PIPs.

6.0 CAPEX Clawback

Annual CAPEX provisions that are unutilized or imprudently expended shall be clawed back during Minor Reviews of Tariffs in line with the requirements of Section 7(a) of Regulations on Procedure for Electricity Tariff Reviews in the NESI.

7.0 Commencement and Effectiveness

The approved PIP and CAPEX programme of IBEDC shall take effect on the 1st day of July 2021 and shall remain effective until the 30th day of June 2026.
